

ElastasealTM

no more roof leaks for the next
quarter of a century

Make roof leaks a thing of the past

Extend the life of a roof with up to 25 years' waterproof protection

Elastaseal™ is a high performance cold liquid-applied roof coating system and a proven solution to the problem of long-term waterproofing of roofs.

Applied by brush or roller, Elastaseal™ is a seamless polyurethane barrier membrane that bonds to virtually any roof substrate, encapsulating every detail and providing unparalleled waterproof protection. Elastaseal™ is compatible with all commonly used roof substrates and delivers up to 25 years' performance before first full maintenance depending on the level of specification.

Unlike traditional roof refurbishment materials (e.g. felt and asphalt) which are reliant on flames and heat in the application process, Elastaseal™ is applied cold, making it one of the safest systems available. The process is so safe, installation can take place while the building is occupied, meaning no disruption to everyday operations.

Tor Coatings provides a complete service including site survey, specification, and manufacture. All Elastaseal™ installation are carried out by fully-trained contractors. Elastaseal™ is supported by a manufacturer's warranty with insurance-backed guarantees available for most systems.

Contact Tor today for more information on Elastaseal™ by simply completing the form overleaf and faxing it to 0191 492 0125. Alternatively, telephone 0191 411 3107, e-mail: enquiries@tor-coatings.com or complete the form at www.liquidwaterproofing.co.uk.

How the **Elastaseal™** cold liquid-applied roof coating system works...

- A - Existing roof
- B - Base coat
- C - Fibreglass reinforcement
- D - Top coat

Example shown, Elastaseal10, delivers 10 years' performance until first major maintenance. Higher specification systems require additional applications of top coat.
