## Sikafloor®-156

## 2-part epoxy primer, levelling mortar and mortar screed

Product Description	Sikafloor®-156 is a two part, low viscosity, solvent free epoxy resin.			
Uses	For priming concrete substrates, cement screeds and epoxy mortars			
	<ul><li>For normal to strongly absorbent surfaces</li></ul>			
	Primer for all Sika Epoxy and PUR floorings			
	Binder for levelling mortars and mortar screeds			
	For internal and external use			
Characteristics /	Low viscosity			
Advantages	Good penetration ability			
	<ul><li>High bond strength</li></ul>			
	Solvent free			
	Easy application			
	Short waiting times			
	Multi-purpose			
	For external use also			
Product Data				
Form				
Appearance /Colours	Resin - part A: transparent, liquid			
	Hardener - part B: brownish, liquid			
Packaging	Part A: 1.875 kg, 7.5 kg and 18.75 kg containers Part B: 0.625 kg, 2.5 kg and 6.25 kg containers Part A+B: 2.5 kg and 10 kg unipacks 25 kg ready to mix unit			
	Bulk packaging:			

Part A: 180 kg and 1000 kg drums
Part B: 60 kg, 180 kg and 1000 kg drums

and +30°C.

24 months from date of production if stored properly in original, unopened and

undamaged sealed packaging, in dry conditions at temperatures between +5°C

**Storage**

Short-term moist/wet heat\* up to +80  $^{\circ}\text{C}$  where exposure is only occasional (steam cleaning etc.).

# System Information

Systom	Structure	Primor:
System	Structure	Primer:

Low/medium porosity concrete: 1 x Sikafloor<sup>®</sup>-156 High porosity concrete: 2 x Sikafloor<sup>®</sup>-156

Levelling mortar fine (surface roughness < 1 mm): Primer: 1 x Sikafloor<sup>®</sup>-156

Levelling mortar: 1 x Sikafloor®-156 + quartz sand (0.1 - 0.3 mm)

+ Extender T

Levelling mortar medium (surface roughness up to 2 mm):

Primer: 1 x Sikafloor<sup>®</sup>-156

Levelling mortar: 1 x Sikafloor®-156 + quartz sand (0.1 - 0.3 mm) + Extender T

Mortar Screed (15 - 20 mm layer thickness ) / Repair Mortar:

Primer: 1 x Sikafloor<sup>®</sup>-156 Bonding bridge: 1 x Sikafloor<sup>®</sup>-156

Screed: 1 x Sikafloor<sup>®</sup>-156 + suitable sand mixture

In practice the following sand mixtures proved to be suitable (grain size distribution for layer thicknesses of 15 - 20 mm):

25 pbw quartz sand 0.1 - 0.5 mm 25 pbw quartz sand 0.4 - 0.7 mm 25 pbw quartz sand 0.7 - 1.2 mm 25 pbw quartz sand 2 - 4 mm

Note: The largest grain size should be a maximum 1/3 of the finished layer thickness. Dependent on the grain shape and application temperatures, the aggregates and the most suitable mix should be selected.

<sup>\*</sup>No simultaneous chemical and mechanical exposure.

### **Application Details** Consumption / Dosage Product Coating System Consumption Sikafloor®-156 Primer 0.3 - 0.5 kg/m<sup>2</sup> Levelling mortar fine 1 pbw Sikafloor®-156 + 1.4 kg/m<sup>2</sup>/mm 0.5 pbw quartz sand (0.1 - 0.3 mm) (surface roughness < 1 mm) + 0.015 pbw Extender T 1 pbw Sikafloor®-156 + Levelling mortar medium 1.6 kg/m<sup>2</sup>/mm (surface roughness up to 2 1 pbw quartz sand (0.1 - 0.3 mm) + 0.015 pbw Extender T mm) **Bonding Bridge** Sikafloor®-156 0.3 - 0.5 kg/m<sup>2</sup> Mortar Screed (15 - 20 mm 1 pbw Sikafloor-156 + 10 pbw 2.2 kg/m<sup>2</sup>/mm layer thickness ) / Repair quartz sand Mortar These figures are theoretical and do not allow for any additional material due to surface porosity, surface profile, variations in level or wastage etc. Concrete substrates must be sound and of sufficient compressive strength **Substrate Quality** (minimum 25 N/mm<sup>2</sup>) with a minimum pull off strength of 1.5 N/mm<sup>2</sup>. The substrate must be clean, dry and free of all contaminants such as dirt, oil, grease, coatings and surface treatments, etc. If in doubt, apply a test area first. **Substrate Preparation** Concrete substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and achieve an open textured Weak concrete must be removed and surface defects such as blowholes and voids must be fully exposed. Repairs to the substrate, filling of blowholes/voids and surface levelling must be carried out using appropriate products from the Sikafloor®, Sikadur® and Sikagard® range of materials. The concrete or screed substrate has to be primed or levelled in order to achieve an even surface. High spots must be removed by e.g. grinding. All dust, loose and friable material must be completely removed from all surfaces before application of the product, preferably by brush and/or vacuum. **Application** Conditions / Limitations +10°C min. / +30°C max. +10 °C min. / +30 °C max.

# Substrate Temperature +10 °C min. / +30 °C max. Ambient Temperature +10 °C min. / +30 °C max. Substrate Moisture < 4% pbw moisture content. Test method: Sika®-Tramex meter, CM - measurement or Oven-dry-method. No rising moisture according to ASTM (Polyethylene-sheet). Relative Air Humidity 80% r.h. max.

Beware of condensation!

**Dew Point** 

The substrate and uncured floor must be at least 3 ℃ above the dew point to redu	се
the risk of condensation or blooming on the floor finish.	

3 Sikafloor®-156

Application Instructions		
Mixing	Part A : part B = 75 : 25 (by weight)	
Mixing Time	Prior to mixing, stir part A mechanically. When all of part B has been added to part A, mix continuously for 3 minutes until a uniform mix has been achieved.	
	When parts A and B have been mixed, add the quartz sand and if required the Extender T and mix for a further 2 minutes until a uniform mix has been achieved.	
	To ensure thorough mixing pour materials into another container and mix again to achieve a consistent mix.	
	Over mixing must be avoided to minimise air entrainment.	
Mixing Tools	Sikafloor <sup>®</sup> -156 must be thoroughly mixed using a low speed electric stirrer (300 - 400 rpm) or other suitable equipment.	
	For the preparation of mortars use a forced action mixer of rotating pan, paddle or trough type. Free fall mixers should not be used.	
Application Method /	Prior to application, confirm substrate moisture content, r.h. and dew point.	
Tools	If $>$ 4% pbw moisture content, Sikafloor <sup>®</sup> EpoCem <sup>®</sup> may be applied as a T.M.B. (temporary moisture barrier) system.	
	Primer:  Make sure that a continuous, pore free coat covers the substrate. If necessary, apply two priming coats. Apply Sikafloor®-156 by brush, roller or squeegee.	
	Levelling mortar: Rough surfaces need to be levelled first. Apply the levelling mortar by squeegee/trowel to the required thickness.	
	Bonding bridge: Apply Sikafloor®-156 by brush, roller or squeegee.	
	Mortar screed / repair mortar: Apply the mortar screed evenly on the still "tacky" bonding bridge, using levelling battens and screed rails as necessary. After a short waiting time compact and smoothen the mortar with a trowel or Teflon coated power float (usually 20 - 90 rpm).	
Cleaning of Tools	Clean all tools and application equipment with Thinner C immediately after use. Hardened and/or cured material can only be removed mechanically.	
Potlife		

Temperature	Time	
+10 <i>°</i> C	~ 60 minutes	
+20°C	~ 30 minutes	
+30℃	~ 15 minutes	

# Waiting Time / Overcoating

Before applying solvent free products on Sikafloor<sup>®</sup>-156 allow:

Substrate temperature	Minimum	Maximum
+10℃	24 hours	4 days
+20℃	12 hours	2 days
+30 ℃	6 hours	1 day

Before applying solvent containing products on Sikafloor®-156 allow:

Substrate temperature	Minimum	Maximum
+10℃	36 hours	6 days
+20℃	24 hours	4 days
+30℃	12 hours	2 days

Times are approximate and will be affected by changing ambient conditions particularly temperature and relative humidity.

## Notes on Application / Limitations

Do not apply Sikafloor<sup>®</sup>-156 on substrates with rising moisture.

Freshly applied Sikafloor<sup>®</sup>-156 should be protected from damp, condensation and water for at least 24 hours.

Avoid puddles on the surface with the primer.

Sikafloor<sup>®</sup>-156 mortar screed is not suitable for frequent or permanent contact with water unless sealed.

Practical trials should be carried out for mortar mixes to assess suitable aggregate grain size distribution.

For external applications, apply on a falling temperature. If applied during rising temperatures "pin holing" may occur from rising air.

Construction joints require pre-treatment. Treat as follows:

- Static Cracks: prefill and level with Sikadur<sup>®</sup> or Sikafloor<sup>®</sup> epoxy resin
- Dynamic cracks: to be assessed and if necessary apply a stripe coat of elastomeric material or design as a movement joint

The incorrect assessment and treatment of cracks may lead to a reduced service life and reflective cracking.

Under certain conditions, underfloor heating or high ambient temperatures combined with high point loading, may lead to imprints in the resin.

If heating is required do not use gas, oil, paraffin or other fossil fuel heaters, these produce large quantities of both CO<sub>2</sub> and H<sub>2</sub>O water vapour, which may adversely affect the finish. For heating use only electric powered warm air blower systems.

### **Curing Details**

## Applied Product ready for use

Temperature	Foot traffic	Light traffic	Full cure
+10℃	~ 24 hours	~ 5 days	~ 10 days
+20°C	~ 12 hours	~ 3 days	~ 7 days
+30℃	~ 6 hours	~ 2 days	~ 5 days

Note: Times are approximate and will be effected by changing ambient conditions.

## **Value Base**

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

#### **Local Restrictions**

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

## Health and Safety Information

For information and advice on the safe handling, storage and disposal of chemical products, users should refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.

### **Legal Notes**

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.

Sikafloor®-156

5/6

Constituction

The harmonized European Standard EN 13 813 "Screed material and floor screeds - Screed materials - Properties and requirements" specifies requirements for screed materials for use in floor construction internally.

Structural screeds or coatings, i.e. those that contribute to the load bearing capacity of the structure, are excluded from this standard.

The resin floor systems as well as screeds fall under this specification. They have to be CE-labelled as **per Annex ZA. 3**, **Table ZA.1.5** and **3.3** and fulfil the requirements of the given mandate of the Construction Products Directive (89/106):

EU Regulation 2004/42

VOC - Decopaint Directive

According to the EU-Directive 2004/42, the maximum allowed content of VOC (Product category IIA / j type sb) is 550 / 500 g/l (Limits 2007 / 2010) for the ready to use product.

The maximum content of  $Sikafloor^{\$}$ -156 is < 500 g/l VOC for the ready to use product.
